Linux arrives at the Santa Maria degli Angeli Institute in Brescia thanks to MODICIA OS

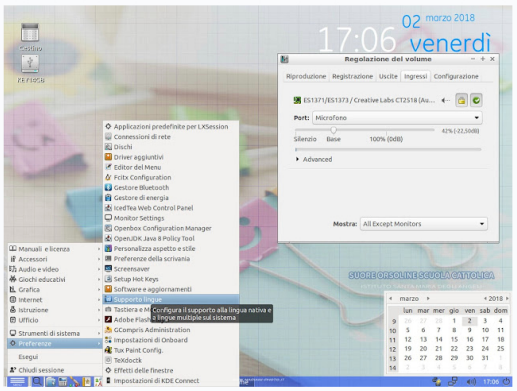
MARCO GIANNINI / MARCH 26, 2018 / COMPUTER SCIENCE , LINUX WORLD , PUBLIC ADMINISTRATION , SCHOOL

Is it possible to use a GNU/Linux operating system in a school? The answer is yes, and confirmation comes from an interesting project involving the Santa Maria degli Angeli Institute in Brescia and the MODICIA OS team.

The computer room with PCs equipped with MODICIA O:S:

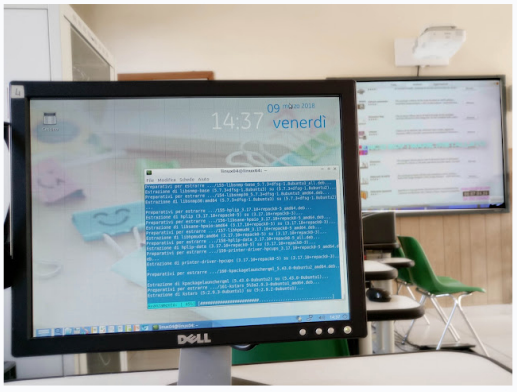
The Santa Maria degli Angeli Institute **of Brescia** **(Ursuline Sisters Catholic School)** is the oldest and most illustrious educational institution in the city and province of Brescia.

In light of an economic recovery and relaunch, a new manager was appointed, the General Director and Treasurer *Dr. Vittorio Boghi* , who, thanks also to the support of the institute's IT manager *Elisa Quadri Mariani* , evaluated and accepted the challenge of renovating the computer room by equipping the **21 workstations** with **MODICIA OS** , a distribution optimized and customized specifically for the school, derived from Lubuntu 18.04.



MODICIA OS

The most striking thing is that finally, for the first time and concretely, Linux is being used in a school where, from primary school onwards, students will be exposed to and work on a Linux distribution, learning about this fantastic operating system and all free software for what it really is: easy, user-friendly and accessible to everyone.



One of the computers

This operation led the school to significant savings in investments and to modernization, as well as complying with the new directives of the Ministry of Education.

What can I say, a beautiful story that we hope will be replicated in other schools.
